

SUPERIOR LIVESTOCK AUCTION SLIDE DESCRIPTIONS

All cattle will be sold on a sliding scale with a Conventional Slide, Superior RightSlide or 2 Way Slide as described below:

If the average weight is over the base weight the price/cwt will be adjusted by the amount stated in the lot information for every pound over that weight on the total net pounds. Example: A load of steer calves with a base weight of 500 pounds sell for \$150.00/cwt. At delivery they can weigh up to 500 pounds and the price will not change. If they weigh 501 pounds (average) with a 16 cent slide the price will be adjusted to \$149.84/cwt; 525 lbs. - \$146.00/cwt; 550 lbs. - \$142.00/cwt, etc.

If the average weight is over the base weight the additional pounds will cost 70 cents per pound. Example: A load of steer calves with a base weight of 500 pounds sell for \$150.00/cwt. At delivery, if they weigh 525 pounds (average) with a 70 cent RightSlide the dollars per head will be calculated as follows:

$$\begin{array}{r}
 500\# \text{ @ } \$150.00/\text{cwt} = \$750.00 \\
 \underline{25\# \text{ @ } \$.70/\text{pound} = \$17.50} \\
 525\# \qquad \qquad \qquad \$767.50 \text{ or } \$146.19/\text{cwt}
 \end{array}$$

2 Way Slide will be calculated the same as the Conventional Slide.
Cattle sold on a 2 way slide will have a 25 pound weight stop over the base weight and a 25 pound price/slide stop under the base weight.

Over: If the average weight is within 1 to 25 pounds over the base weight the price/cwt will be decreased by the amount stated in the lot information for every pound over the base weight on the total net pounds. Example: A load of steer calves with a base weight of 500 pounds sell for \$150.00/cwt. At delivery, if they weigh 510 pounds (average) with a 16 cent slide the price will be adjusted to \$148.40/cwt; 525 lbs.-\$146.00/cwt. If they average over 525 pounds there will be a weight stop. Example of settlement with an average weight of 535# at delivery: 525# @ the slid price of \$146.00/cwt. and 10 pounds free, for a total of \$766.50 per head or \$143.27/cwt.

Under: If the average weight is within 1 to 25 pounds under the base weight the price/cwt will be increased by the amount stated in the lot information for every pound under the base weight. Example: A load of steer calves with a base weight of 500 pounds sell for \$150.00/cwt. At delivery, if they weigh 490 pounds (average) with a 16 cent slide the price will increase to \$151.60/cwt; 475 lbs. - \$154.00. If they average less than 475 pounds there will be a price/slide stop. Example of settlement with an average weight of 465# at delivery: 465# @ the slid price of \$154.00/cwt, for a total cost of \$716.10 per head.
